PROFESSIONAL SUMMARY

MCA fresher (Pondicherry University, Expected May 2026) and self-taught Full-Stack & Mobile Developer with hands-on experience building and shipping three production-grade applications using Flutter, Python, Firebase, and Supabase. Built a real-time emergency SOS system with live GPS tracking, RBAC, and offline-first sync — independently, from system design to deployment. Open to Internship, Trainee, or Entry-Level Software Engineer roles (Flutter / Mobile / Full-Stack Python) in Bangalore, Chennai, or Kerala. Available immediately.

EXPERIENCE

Independent Flutter & Full-Stack Developer

Jan 2025 – Present

Self-Directed | Remote

- Designed, developed, and independently deployed 3 production-grade cross-platform mobile and full-stack web applications using Flutter, Dart, Python, Firebase, and Supabase — owning the complete SDLC from requirements gathering and system design through testing and release.
- Architected and implemented RESTful API backends using Python Flask and FastAPI; integrated third-party APIs including Google Maps SDK and Firebase Cloud Messaging to deliver real-time location tracking and push notification features.
- Engineered offline-first mobile architecture using Firestore local persistence and conflict-free sync strategies, ensuring zero data loss in low-connectivity environments.
- Optimised Flutter UI and UX for Android and iOS from a single Dart codebase using Provider state management, reducing cross-platform development overhead significantly versus native development.
- Integrated AI-powered features including a conversational chatbot and Python-based image processing pipelines (OpenCV), demonstrating ability to ship ML-adjacent product features end to end.

TECHNICAL SKILLS

Languages: Java, Python, Dart, JavaScript, SQL

Mobile: Flutter (Android & iOS), Dart, Provider / setState state management

Web: HTML5, CSS3, JavaScript ES6+, REST APIs, Python Flask / FastAPI

Databases & Cloud: Firebase Firestore, Supabase (PostgreSQL), MySQL, Offline Persistence

Tools: Git, GitHub, VS Code, Android Studio, Google Maps API, FCM, Agile / Scrum

PROJECTS

RES-Q — Real-Time Emergency Response System

Jan 2026

GitHub: <https://github.com/prasathshiva81-stack/Res-Q>

Tech: Flutter · Firebase Firestore · Google Maps SDK · FCM

- Architected multi-role SOS platform (User / Volunteer / Admin) with RBAC; each role sees only context-relevant data in real time.
- Engineered offline-first request queue using Firestore local persistence — zero SOS data loss in low-connectivity; auto-syncs on reconnect, validated across 50+ offline scenarios.
- Integrated Google Maps SDK for live GPS tracking and nearest-volunteer dispatch, cutting assignment time by ~35–40%.

- Implemented FCM push notifications with priority-flag handling; delivery latency under 2 seconds for critical SOS events.

GoLocal — Hyperlocal Services Marketplace

2025

GitHub: <https://github.com/prasathshiva81-stack/golocal-app>

Tech: Flutter · Supabase (PostgreSQL) · Google Maps API · AI Chatbot

- Shipped production cross-platform app (Android & iOS) connecting users with local service providers from a single Flutter codebase.
- Replaced custom backend with Supabase — RLS, real-time subscriptions, Supabase Auth — cutting infrastructure overhead while keeping enterprise-grade data integrity.
- Built geo-query powered service discovery using Google Maps API; reduced user time-to-provider-selection by ~30%.
- Integrated AI chatbot for guided service selection, lowering drop-off for non-technical users.

Virtual Try-On System — AI-Powered Web App

2025

GitHub: https://github.com/prasathshiva81-stack/virtual_tryon

Tech: HTML5 · CSS3 · JavaScript ES6+ · Python Flask · OpenCV

- Full-stack app overlaying clothing onto user photos using background segmentation, affine transformation, and alpha compositing — avg. processing time under 3 seconds.
- Decoupled Python REST API backend for image pipelines; responsive mobile-first frontend accessible across all screen sizes.

EDUCATION

Master of Computer Applications (MCA)

2024 – Present

Pondicherry University, Puducherry | **Expected Graduation: May 2026**

Bachelor of Computer Applications (BCA)

2021 – 2024

Indira Gandhi College of Arts and Science, Puducherry

CERTIFICATIONS

-
- Applied Accelerated Artificial Intelligence — NPTEL (2025)
 - Joy of Computing using Python — NPTEL (2025)

ACHIEVEMENTS

-
- Competed in Smart India Hackathon (SIH), representing Pondicherry University — India's largest national government-sponsored hackathon.
 - Independently built and deployed 3 full-stack and mobile applications end-to-end, owning complete lifecycle from system design to production release.
 - Completed 2 NPTEL certifications in AI and Python concurrently with full-time MCA coursework.
